

PROTECTING THE DEFENDERS

Australian Security Fencing Pty Ltd have been in the business of providing tailored fencing solutions to clients since 1988, and through two decades of business have developed systems of asset protection with the deterrence and security of impenetrable fencing. Australian Security Fencing Pty Ltd specialises in adapting to client need, particularly in the high security market and has worked on protection and deterrence for prisons, Defence Force sites, Government buildings and commercial entities.

The experienced team at Australian Security Fencing Pty Ltd won the tender to design, manufacture, supply and install its Securemax® 358 high security fencing at the Headquarters Joint Operations Command (HQJOC) site, which will house the headquarters for Australia's defence network. This was predominately based on the teams work with Leighton and the Defence Force to produce a design allowing maximum defence capabilities, balanced with a cost effective approach. The finished product, which resulted in multiple fences to 5.8km, took a team of between three and six workers, almost six months to complete.

Australian Security Fencing Pty Ltd were highly aware of the particular demands of the HQJOC site, which required their security fencing to repel both pedestrian and vehicle penetration.

To provide adequate protection from attack, Australian Security Fencing Pty Ltd have designed the barrier fence to minimise any gaps between the concrete base and the Securemax fence, while ensuring that the fence itself provided a smooth flat surface with small apertures to avoid any chance of finger holds for climbing.

The fence is topped with Australian Security Fencings' own 900mm dia. Ripper Blade Razar Tape® giving a robust anti climb topping to this extremely formidable barrier.

Based in Windsor in Sydney's North West, Australian Security Fencing Pty Ltd, has built on their long industry experience in security in all key areas of perimeter protection and detection.

The ASF team has developed their own extensive range of Perimeter Electronic

Detection including 'Forcefield' and 'Electronic Detection System' (EDS) which provide a visible deterrent, an anti touch electronic pulse and an alarm system for back to base monitoring.

To ensure the stringent requirements of the Australian Standards are met, Australian Security Fencing Pty Ltd provides extensive testing, warranties and full back up service on all their products. The ability for in house design and their off the shelf electronic products give Australian Security Fencing Pty Ltd the edge in today's perimeter barrier / detection market.
