

CROC TOP

Spiked Fence Toppings

Spiked Fence Toppings have been developed by Australian Security Fencing Pty Ltd as a low cost security barrier option for deterring would be intruders from climbing over a fence. It is a simple yet highly effective method of discouraging the possibility of using the top rail of the fence as a pulling point to climb.

Croc Top is a spiked metal topping that is very easily fixed to the top of most security fencing systems. It can be added to brickwork, colourbond and chainlink fencing as well as masonry walls and gates.

With the Securemax® 358 High Security Mesh fencing System, manufactured by ASF, Croc Top can be used as the top rail to provide a discreet but effective anti climb topping.

The Croc Top spikes are created by machine punching the steel and forming a 25mm high triangular spike which in profile, gives the appearance of crocodile skin.

Croc Top is extremely strong and rigid and cannot be bent or twisted.

Visually, Croc Top does not intrude on the general appearance of a fence or wall and comes in either galvanised or powder coated to match your existing structure.

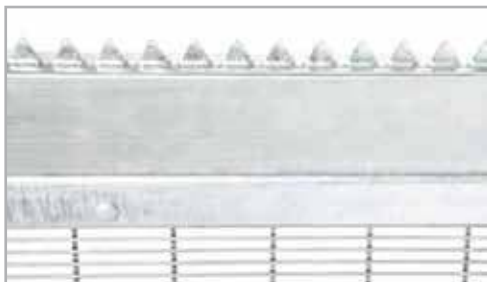

Croc Top comes in 2.4m lengths of either flat strip or angle.

Croc Top comes in a galvanised or powdercoated finish and can be used as the top rail in the Securemax® fencing system.
